

MASTERS AND CERTIFICATIONS

TQM Itaca Technology can supply different types of certified masters.

Dimensional Masters

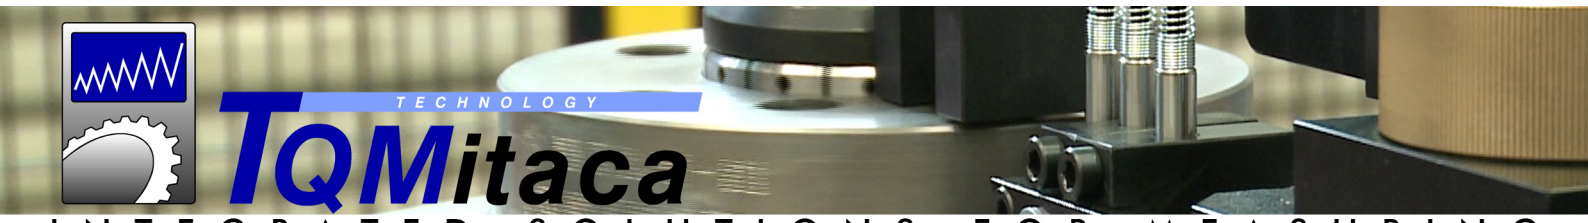

We are able to provide zero set and verification master pieces for control gauges for brake discs, brake drums, electric armatures, and for any type of multi-gauging system. The masters are complete with test reports and, if requested, with Accredia certification.

Sonic Masters

For the periodic verification of the correct operation of a frequency control station, it's useful to have at disposal at least one object with known natural vibration frequencies, possibly measured and certified with an upper class instrumentation.

TQM Itaca Technology has a laboratory available for the certification of natural vibration frequencies. We can provide sonic master pieces, built with special material, with test reports

MASTERS AND CERTIFICATIONS

and with reference to primary certificates.

Certifications of parts supplied by customers

It’s possible to certify production parts supplied directly by the customers.
