News

TQM Itaca is glad to present the new software Itaconv 6 and the new release of the software Itastat 6.4.0.

Itaconv is the optimal solution for the management of data coming from the metrological room. The new version is easier to configure, more flexible in the protocols management and it is equipped with the safety functions for the operation in network.

The big news of Itastat 6.4.0 is the management of the network failure, fundamental for the correct functioning of the measuring stations and for the safety of data in all the network installations. Some new features have been introduced in the different modules, and others have been improved to guarantee a more linear use. Furthermore, recent experiences took us to realize new operating modes for the data exchange with external Databases.

As tradition, TQM Itaca organizes a free training course of the duration of 1 day in the new headquarter in Mazzano (Bs), on the 24th January 2008, with the following program:

09:00 – 12:30 Presentation of the new release

12:30 – 14:00 Lunch

14:00 – 16:00 Working Groups

16:00 – 17:30 TQM Itaca – “what’s going on?” News coming
