INTEGRATED SOLUTIONS FOR MEASURING

Automatic lines control – Itamatic

The software Itamatic[®] manages the cracks control benches: it has the same logic structure of the other software of TQM Itaca Technology.

- Simple and intuitive
- Logic structure as Itageo 6[®], Itasonic 2010[®], Itastat 6, with batches and measuring programs
- Data saved in the database of Itastat 6 in SQL format
- Users management with operator permissions
- Auxiliary Data management
- S/N management
- Traceability management
- Master verification management
- Guided creation of control plans - measuring programs where there are defined all the parameters of the test
- It allows to integrate also other control softwares, for example Itasonic 2010[®] for FRF control
- Wide possibilities to customize the user interface
- Complete information, about the measured piece and about the loaded batch, with details for each controlled area.

Information related to the measured piece and recapitulatory column of the rejects for each single controlled area. Pareto rejects.

Moreover, the Itamatic software is used to manage the automation of Automatic control lines:
