

Statistical analysis – Itastat 6 analysis

Statistical analysis is fundamental for the exact interpretation to give to measuring data; the same data analysed with different criteria can return different results: important decisions may depend on these results. For this reason it's necessary that the analysis is performed correctly.

ITASTAT 6 Analysis is the software module for the **Statistical Analysis** which integrates 20 years of experience of TQM Itaca Technology with the competence of the Politecnico of Milan (Mathematics department - IMATI - CNR) directly involved in the development of algorithms for the theoretical distribution model research which best represents the real data. The complete Ford tests compliance is guaranteed. Itastat 6 Analysis, besides Normal, manages Non-Normal distributions: Log-Normal, Extended Limits Normal, Semi-Normal, Folded Normal, Weibull, Rayleigh, Johnson, Mixed.

Available modules:

Itastat 6 Analysis SPC: Machine Capability, Preliminary Analysis, Process Analysis, 100% control.

Itastat 6 Analysis MSA: measurement system analysis module.

Report Editor: To modify the existing reports and/or create new reports.

Itaselect: Powerful producer of queries, it allows to select the data contained in a database up to auxiliary data level, in order to make comparisons between batches, temporal comparisons, etc...

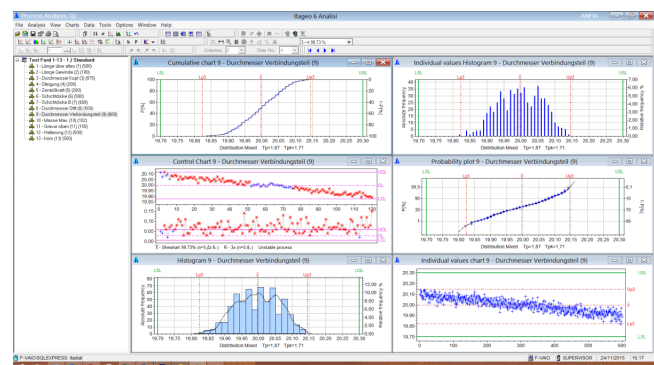

Main Features:

Total configurability of the evaluation method.

Calculation of capability indexes with percentiles method.

Management of Non-Normal distributions.

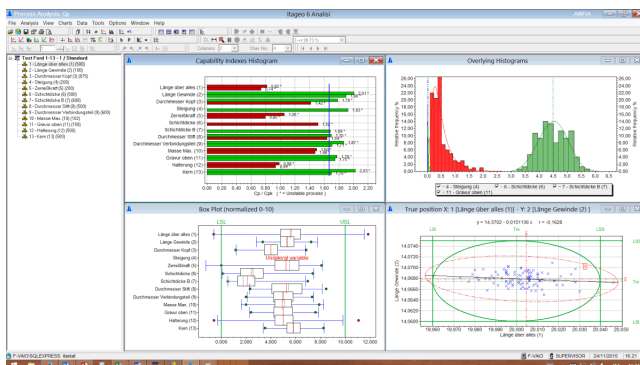

Effective graphical representations: histograms, GPNs, control charts, tables.

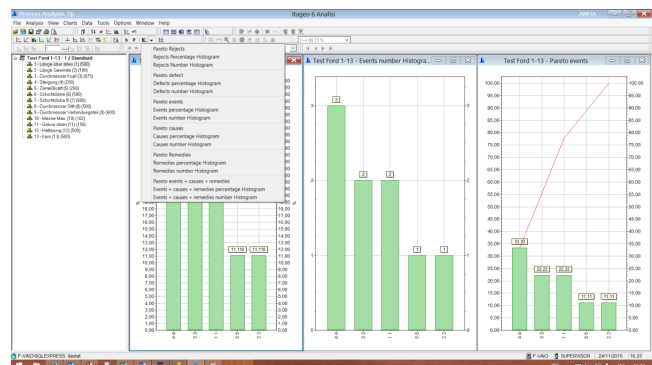

TECHNOLOGY
TQM Itaca

INTEGRATED SOLUTIONS FOR MEASURING

Statistical analysis – Itastat 6 analysis

Multi-characteristic charts: Linear correlation, Box Plot, Capability indexes histograms.

Pareto Analysis (Rejects, Defects, Events, Causes, Remedies).

Advance selection on data stored in the database.

Native utilization of relational database in MS-Access and MS-SQL format;

Data import/export from dfq, dfd/dfx and MS-Excel formats.

Itastat 6 Analysis is an integral part of the [Itastat 6 Suite](#), the TQM Itaca Technology integrated system for the acquisition, the saving, the statistical analysis and the management of all measuring data from any “standard” measuring instruments, updated and maintained.
